About study programme

Are you interested in how financial markets work, helping reach financial goals, or enjoy problem-solving with math and statistics? The VSB-TUO professional bachelor's degree program Financial and Accounting Advisory is an affordable way to prepare for a career in financial consulting, investment portfolio management, financial reporting, company financial management, accounting, taxation, and investment banking. Learn how to analyse an organisation's financial data and make strategic recommendations that support its growth. You will achieve a more sophisticated view of how the tools of modern finance can be used to evaluate investment opportunities, make capital structure and capital management decisions, and drive organisational value. This program focuses on the application of skills and knowledge in traditional finance practice as well as emerging trends and technologies. Moreover, our curriculum adheres to rigorous standards set by globally recognised professional associations such as the Certified Financial Analyst (CFA) and the Association of Chartered Certified Accountants (ACCA).

Study aims

The goal of the professionally oriented bachelor's study program Financial and Accounting Advisory is to prepare qualified and practically oriented experts of international level who will be able to perform specialized work in the field of investment management, creation of investment portfolios, financial analysis, controlling and financial, accounting and tax consulting. The study is focused and profiled especially with regard to the acquisition of knowledge required for obtaining certification from the globally recognized professional associations CFA (Certified Financial Analyst) and ACCA (Association of Chartered Certified Accountants).

Graduate's knowledge

Graduates of the program will be equipped with the necessary knowledge and practical skills so that they are able to independently solve problems and understand current trends in the field of financial consulting, creation and management of investment portfolios, controlling and financial reporting, financial management of companies, accounting and taxes. These skills will be acquired and verified during the course of study as part of practical teaching and professional experience. The structure of the program is designed to provide graduates with the necessary knowledge to successfully pass the first and second levels of the exam within the CFA program as well as to obtain the Advanced Diploma in Accounting and Business within the ACCA qualification.

The goal of the study is mainly the acquisition of knowledge in the areas of:

- financial reporting and financial analysis,
- corporate finance,
- portfolio management and investment instruments,
- financial and managerial accounting,
- taxes,

- managerial economics,
- professional ethical standards.

Graduate's skills

Graduates will gain skills and be able to:

- demonstrate knowledge of financial reporting procedures and analyze reported company results in connection with economic reality,
- apply basic quantitative methods in financial decision-making,
- orient yourself in financial and managerial accounting,
- understand the principles of taxation,
- evaluate the company's financial performance in connection with corporate governance,
- understand the basics of portfolio and risk management, including planning and creation of investment portfolios,
- demonstrate practical knowledge in the field of derivatives and alternative investments,
- describe and apply the basic valuation models of companies,
- understand professional ethical standards.

Graduate's general competence

Graduates are prepared as bachelors with a professional and applied foundation in the field of financial and accounting consulting. The basis is knowledge of mathematics, statistics and quantitative methods in finance, which are followed by professional and practical knowledge in the field of finance, accounting and capital markets. A bachelor's degree graduate is therefore qualified as a professionally educated financial expert who can work especially in the field of financial and accounting consultancy.

Students of the professional bachelor's field of study are able to:

- make independent and responsible decisions in only partially known contexts based on a framework assignment,
- systematic thinking and work with professional financial concepts,
- manage and coordinate the team and use the theoretical knowledge of the field to acquire additional professional knowledge, skills and competences of other team members, define assignments for professional activities and bear final responsibility for the results of teamwork,
- include consideration of their ethical dimension in the solution of financial problems,
- communicate information about the nature of professional problems and one's own opinion on their solution to experts and laymen in an understandable and convincing manner,
- clearly summarize the opinions of other team members,
- independently acquire additional professional knowledge, skills and competences based mainly on practical experience and its evaluation, but also by independent study of theoretical knowledge of the field.
